Logdriver Documentation

Release 0.0.1

Simon de Haan

April 08, 2016

Contents

Logdriver makes ephemeral logs available downstream as an HTTP Event Source resource.

Usage

```
$ logdriver -h
Usage of ./logdriver:
  -a="0.0.0.0:3000":  (shorthand for -address)
  -address="0.0.0.0:3000": The address to bind to.
  -d="":  (shorthand for -directory)
  -directory="": The directory to tail log files from.
```
